Subject: A3 Cushcraft in the attic

Hello, interesting about the multi antennas in your attic. How did you run your
cable? Thru the wall, down in the open? Do you use any rotators in the attic?
Thanks...

: commercial AM radio. Any info out there?

The only practicle antenna for AM is a Loop. The last coupld of
receivers I purchased came with a loop antenna. Try 10 to 15 turns on an
6 to 12" form.

: Also, how about a nice little antenna for FM commercial band?

Radio Shack makes a nice yagi for FM use.

Save on the money and build a J-pole, paint it balck with non-metallic
paint then put a flag on it. Let the nay sayers fight with your
Constitutional right to display your patriotism.

Greetings Tyler:

There is an article on MININEC starting on page 18 of the Feb
1991 issue of QST that may help you. It lists various sources of
information.

Subject: MININEC INTERNET SOURCE?

Greetings To ALL:

I wonder if anyone knows if the MININEC source listing and/or compiled program are/is available via the INTERNET. I understand it is a public domain program available from the NTIS (National Technical Information Service) but I wonder if it happens to be available via E-mail?

Best Wishes,
T.M. Alldread

From: nx7u@aol.com (NX7U)
Subject: Problems with nec-pc (NEC2D)

I've downloaded the nec-pc (NEC2D) executable from /pub/rander/NEC but have run across a run-time error. All geometries which involve patches crash the program. The output file is

written up to the point "antenna environment--(whatever)" and then output ceases.
The run-time error description is:
"NDP error-arithmetic overflow in hsfld.
called by cmws
called by cmset
called by _lf_main"
ok, I AM a FORTRAN programmer (even own the Lahey compiler that this program was made under) and a long-time NEC user. What I want to know is, has anyone else had this problem? Is there a patch available (outside of recompiling it all myself)? Or have I made some stupid mistake somewhere?
The NEC files I've been using for input are just the example files in the official documentation.
Thanks in advance

Subject: Racal Radio's

Aloha,

If anyone can help I am looking for an E-Mail address for RACAL so I can request some information on a radio I picked up at a Swap meet. It is a Racal Receiver Model TRA-931X. If anyone can point me in the right diriection I sure would appreciate it.

Thanks,

Rich

Then go for the R5/R7's. I had a GAP and its good but not similar gain at the higher frequencies as the cushcraft. Also the MFJ series are a bit unwieldy and awkward to put together. One fellow local has one and the gain is not all it is hyped up to be in the ads. My R7 went up,

required a bit of tuning but once up forget it. The GAP is great for sticking up and no tuning required and it does have 80M for that once in a while scan down there. With the sunspot 3's down for the next 2 years, 40/80M are the place to be so overall you might be better here. As a plus you do get 2/6M in the one antenna.

Subject: TH3JRS Help

Hi all,
I just a bought a used HyGain TH3JRS tribander in pieces and with no instructions! If there is anyone out there who could perhaps e-mail me the assembly dimensions I would be eternally grateful.
I want to get this antenna up as soon as possible before it gets REALLY cold (It's only around 10 degrees F now).

Thanks in advance,
John - VE8EV

Build yourself a J-pole. Quite innucious, not large stick in a corner , cheap to build plus excellent radiation.

Check with the other local hams. In some cases their may be no requirements. If you don't need a premit don't insist on one.
